Questionnaire on the evaluation and review of the Regulation (EC) No 1222/2009 on the labelling of tyres

Fields marked with * are mandatory.

Consultation on the evaluation and review of the Regulation (EC) No 1222/2009 on the labelling of tyres: Introduction

This questionnaire is targeted at individuals and organisations with an interest in the labelling of tyres for fuel efficiency and other parameters. Responses are particularly welcome from members of the public, public authorities, businesses, and other non-governmental organisations.

This public consultation follows an extensive series of technical consultations with industry, experts, and other organisations, as well as a comprehensive study of the Regulation carried out by an independent researcher. The results of the study in full can be found at the following link: http://www.labellingtyres.eu (http://www.labellingtyres.eu).

The results of this consultation will be used to inform the revision of the Regulation (EC) No 1222/2009 (http://eurlex.europa.eu/legal-content/EN/ALL/?uri=celex%3A32009R1222)on tyre labelling [1],[2] . If a revised Regulation is proposed, it will be discussed, possibly amended, and voted on by the European Parliament and the Council of the European Union.

You can skip questions to which you do not feel comfortable responding. However, replies to questions marked with an asterisk are compulsory. You can also pause at any time and continue later. Once you have submitted your answers, you will be able to download a copy of your completed questionnaire.

,	Visibility of tyres when purchasing . The study also found that when people buy tyres, either alone or as part of a vehicle, often do not see the tyre itself before purchasing it. Increasingly, in fact, people buy tyres online.
9a)	When purching your last tyre, did you see the tyre itself beforehand?
•	Yes
О	No
О	Don't know or can't remember
9b)	Did you see the EU label ?
•	Yes
0	No
О	Don't know or can't remember
,	Relative importance of label characteristics. Which of the tyre's characteristics currently shown on the label do you ider to be the most important when purchasing a tyre?
	Its wet grip performance
O	Its fuel efficiency performance
0	Its external rolling noise performance
О	Don't know or no opinion
•	Other (please state):

Other (please state):

200 character(s) maximum

It is customers choice what characteristic they find most important. In the tyre awareness campaign in the NLs the choice is often safety (wet grip).

- 11) Information on all tyres. The study found that most people are not offered a choice of tyres when purchasing a vehicle. Do you agree that businesses selling a vehicle should always provide tyre labelling information for the tyres fitted on that vehicle, including in situations when the customer is not given a choice of tyres?
 - Yes
 - No
 - O Don't know or no opinion
- 12) Raising awareness. The study found that some consumers and organisations were not aware of tyre labelling or the benefits of investing in fuel-efficient tyres. Which of the following options (if any) would you like to see included in the Regulation in order to raise awareness?
 - ☐ Encourage Member States to run awareness campaigns to increase consumer knowledge of the tyre labelling scheme ☐ Encourage businesses to run awareness campaigns to increase consumer knowledge of the tyre labelling scheme
 - ☐ Extend the label's display by ensuring more types of advertisements (for example, on billboards or in magazines) for tyres
 - ☐ Encourage Member States to raise awareness within their central government that they are required to purchase only tyres in the highest fuel efficiency class (Annex III of the Energy Efficiency Directive 2012/27/EU)
 - □ Don't know or no opinion
 - ☑ Other (please state):

Other (please state):

200 character(s) maximum

The NLs is facilitating a campaign to raise awareness of the importance of tyres: www.kiesdebesteband.nl

EUSurvey - Survey Page 4 of 6

13) Pre-sale provision of information . The study found that the label is often not visible to customers when they buy tyres. Which of the following options (if any) would in your opinion improve the visibility of the label to customers when they buy tyres.
 □ Online labelling – the label is shown on the screen when tyres are offered for sale online □ Distributor must show each label – the tyre distributor must show the customer the label for each tyre under consideration □ Labels always on tyres – ensure that labels are always visible on the tyres for sale themselves rather than just accompanying them □ Don't know or no opinion ☑ Other (please state):
Other (please state):
200 character(s) maximum
Extend the information on the label. See the background document 'Tyres in Europe' that was attached to the letter to the Commission in July 2017 for an example how this can be done.
14) Third-party verification. At present, the testing of a tyre's performance is done by the manufacturer of the tyre. There is no requirement for public authorities to ensure independent or third-party verification of the results.
14a) Would you be more confident of the accuracy of the label's information if third-party verification of tyre test results were mandatory?
Yes No Don't know or no opinion
14b) In your opinion, should third-party verification of tyre test results be introduced as a requirement?
 Yes, for every tyre model Yes, but for a representative sample of tyres No
○ Don't know or no opinion
15) Market surveillance . The study found that some areas and some Member State authorities were not as good as others at checking if labels were accurate or were being shown to customers. Which of the following options (if any) would in your opinion improve market surveillance?
 ☑ Update wet grip testing – change the way wet grip of tyres is tested to make it more up-to-date with current technology and understanding ☑ Labels with each batch – make sure that labels are always attached to each batch of identical tyres ☑ Better sharing of results – when authorities inspect tyre businesses, make sure that the results are available to industry as a whole ☑ Other (please state):
Other (eleges state):
Other (please state):
500 character(s) maximum On testing: Fuel efficiency and noise get better when tyres wear. This is not the case with
wet grip. There, the braking distance increases with wear. The standard for wet grip should include a maximum detoriation for worn tyres.
On labels on each batch: yes a new batch need new testing and possiblu a different label
On better sharing of test results: yes, have all test data in an uniform format on the internet. Site from the EC. See document Tyres in Europe for more detail.

Technical views and opinions the tyre labelling Regulation (EC) 1222/2009

This section asks more specific questions on technical aspects of tyre labelling. Although views are welcome from all stakeholders, those without specialised knowledge of tyre labelling may wish to leave the following section blank.

- 16) **Snow and ice performance**. The tyre label does not currently include information on tyres primarily designed to perform better in ice and/or snow conditions. Do you think that information on snow and ice performance of a tyre should be included in the label?
 - \odot Yes it should be mandatory
 - \bigcirc Yes it should be voluntary

General remark

The evaluation and update of the Regulation on Tyre labelling is closely linked to the Regulation on General Safety (EC no 661/2009). In the Regulation on General Safety the tyre limits for fuel efficiency, wet grip and noise are set. In July 2017 the Netherlands ministry of environment sent a letter to 4 director generals of the European Commission asking to start working on strengthening of the tyre limits and interest the Commission to a number of other tyre related issues among which improving the tyre label.

Comment to various questions

Q 7b: The information on the label is limited to letters and colours. One of the reasons to start an public awareness raising campaign in the Netherlands is that the label gives very little information. We propose more information on the label to encourage a discussion between people buying tyres and retail. See the background document 'Tyres in Europe' that was attached to the letter to the Commission for an example how this can be done. Having a label as proposed by the Netherland would almost make the campaign redundant.

Q 9a/b: In the Netherlands the tyre label is mandatory both in the shops and on the internet. That is not a problem. Another thing is whether garages/workshops advise people when their car is brought for inspection/maintenance and new tyres are necessary. Then usually just a phonecall is made and information on label values is not transmitted. The customer would in most cases not be informed about the tyre label of the new tyres when picking up the car.

Q 16: See the background document Tyres in Europe attached to the letter to the Commission for an example how this can be done.

Q 18: The Netherlands is greatly concerned about microplastics in the environment. We do favour a limit on abrasion of tyres but not on mileage. And we would like to see a proposal for that from the Commission. Yet, we are very reluctant to put anything on the tyre label. The most important argument would be that the consumer would look at any indicator regarding wear/durability/abrasion as an indicator for mileage. Tyre manufacturers could get a better label when they increase the tyre tread. And as a result the emission of microplastics would increase. See for more details the document Tyres in Europe.

Q 19: See the comment to Q 18 above. An argument of a lesser importance is that the label would be more difficult to understand and to interpret. Including an indicator for snow/ice (see answwer to Q16) would make five indicators on the label. A5th indicator on the tyre label would be too much information.
